

Understanding trends and disparities in incomes in Malaysia among states and districts.

Income Trends by State in 2022

Analyzing trends in average income over time across different states.

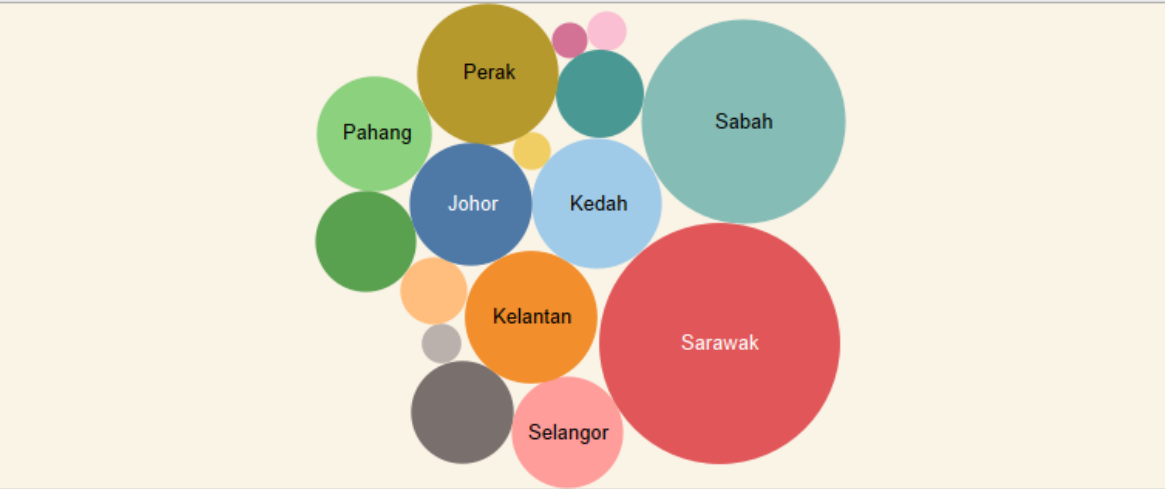

In 2022, the average income in Sarawak has reached an impressive RM 197,016. Meanwhile, Perlis experienced a more modest rise during the same period, with an average income of RM 5,664 in 2022. This analysis uncovered substantial variations in income growth among states.

Gini Coefficient Analysis

Investigating income inequality within states and districts using the Gini coefficient.

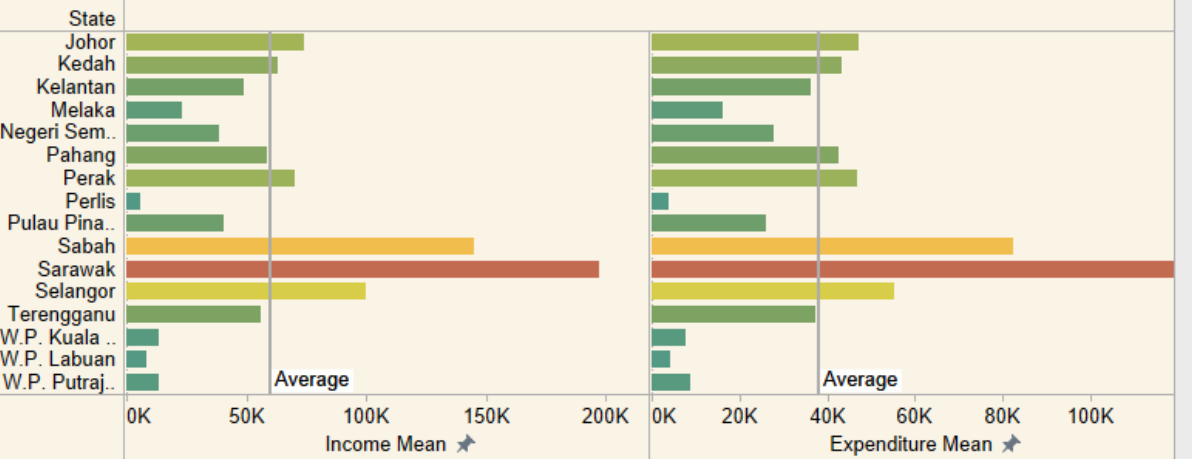

Sarawak exhibited again the highest inequality with a Gini coefficient of 13.66 in 2022, indicating significant income disparities. In contrast, W.P Labuan boasted a lower Gini coefficient of 0.30, signaling a relatively more equitable distribution of income.

District-Level Income and Expenditure Analysis

Comparing average income and expenditure across states.

Sarawak stands out with the highest average income of RM 197,016 in 2022, while also maintaining a relatively high average expenditure of RM 125,222. On the other hand, Perlis faces income challenges, with an average of RM 5,664 in 2022, paired with an average expenditure of RM 3,834. These insights emphasize the importance of examining both sides of the financial spectrum.

Poverty Rate Analysis

Examining the distribution and trends of poverty rates across districts and states.

Sarawak exhibited the highest inequality with a Gini coefficient of 13.66 in 2022, indicating significant income disparities. In contrast, W.P Labuan boasted a lower Gini coefficient of 0.30, signaling a relatively more equitable distribution of income.
